Hi Kay,

I'm so glad to hear the sediment samples came back below MTCA levels and that it is eligible for funding. I am supportive of the cost increase, as we discussed as a team.

Thank you for the thorough summary,
Jenna

Yes—they are below MTCA levels so the project qualifies for funding.

Subject: Cost Increase amendment request for 16-1306 Seahorse Siesta
Importance: High

Hi Jay, Jenna, and Tish. Please reply to this email to confirm if you support adding $100,000 of ESRP funds to the Seahorse Siesta project 16-1306 to support a total cost increase request of $405,000 for the additional sediment removal, barge operations, and disposal. Attached are two documents regarding Northwest Straits Foundation's cost increase request for the Seahorse Siesta project. One is a letter to the salmon lead entity; the other is RCO's amendment request form that clarifies which RCO funds are proposed to be utilized to fill the gap. The sediment testing confirmed levels were below MTCA levels so RCO may contract for the work.

ESRP awarded $46,815 FY19-21 funding to the project via ESRP small grant application #18-2062 and those funds were merged into existing PSAR project 16-1306. Our previous discussion suggested awarding up to $100,000 of ESRP funds as a cost increase to the project, provided sufficient unused funds are returned from the Killisut Harbor project. The unused Killisut Harbor funds are not yet available as the sponsor is are awaiting final bills, but the project sponsor confirmed the returned funds will exceed the $100,000 request.

Please let me know if you have any questions, Kay

Subject: amendments for 16-1306

Kendall,

Attached is the amendment request and the LE support for the massive undertaking Kay and I are working on for this project.

First, please route the request and the following two amendments. 17-1064 Amendment #3 and 16-1306 Amendment #4. I'll need to take both of these to Kaleen for approval but if you could start the process that would be great. I'm going to send Tara and email and fill her in on the details.

Thanks a bunch.
