Project Proposal

Project Description

The Tulalip Tribes and partners will investigate the ecological and geomorphic outcomes of the Meadowdale Park estuary restoration project in Edmonds, WA (RCO project number 18-1259) to inform the siting and design of future coastal stream mouths. The restoration project is the first stream mouth restoration project along the railroad corridor. The restoration included novel elements of excavating a large estuary embayment with room for the site to adjust to fluvial and coastal processes, as well as sea level rise. The proposed investigation will inform the onsite and offsite benefits of restored sediment transport conditions, as well as the sustainability of the estuary design.

Project Questions

#1: What is the project's primary purpose?

Other
(please
describe)

Site selection and site design guidance

#2: Does the project develop an estuarine/nearshore restoration planning tool?
